

Documentation & Coding for Reimbursement

- ✧ **97112 Neuromuscular Re-Education of Movement, Balance, Coordination** :The clinician and/or patient perform activities to one or more body areas that facilitate reeducation of movement, balance, coordination, kinesthetic sense, posture, and proprioception.
- ✧ **97110 Therapeutic Exercise**: A manner of effecting change through the application of clinical skills and/or services that attempt to improve function, develop strength, endurance, range of motion, and flexibility
- ✧ **97116 Gait Training** :The clinician instructs the patient in specific activities that will facilitate ambulation and stair climbing with or without an assistive device. Proper sequencing and safety instructions are included when appropriate.

Documentation & Coding for Reimbursement

- ✧ **97530 Therapeutic Activities - Direct** : The clinician uses dynamic therapeutic activities designed to achieve improved functional performance (e.g., lifting, pulling, bending).
- ✧ **97150 Group Therapy**: The clinician supervises group activities (two or more patients) during therapeutic procedures on land or the aquatic environment. The patients/clients do not have to be performing the same activity simultaneously; however, the need for skilled intervention must be documented.

Documentation & Coding for Reimbursement

- ✧ **97533 Sensory Integration:** Sensory experience includes touch, movement, body awareness, sight, sound and the pull of gravity. The process of the brain organizing and interpreting this information is called sensory integration. Sensory integration provides a crucial foundation for later, more complex learning and behavior. An occupational therapist or rehabilitation specialist works one-on-one with individuals with sensory integration disorders to provide techniques for enhancing sensory processing and adapting to environmental demands. Sensory integration disorders may be the result of a learning disability, illness or brain injury.
